

CCF CERTIFICATION NOW OFFERS SPRINT MARKET ENDORSEMENT

The CCF just released a **Sprint Market Endorsement** that device vendors can use to certify their CDMA devices prior to Sprint acceptance.

The Sprint Market Endorsement customizes CCF certification to meet the specific needs defined by Sprint. This endorsement includes CCF certification core testing that consists of minimum performance and signaling conformance testing necessary to ensure that CDMA devices have been tested to operate in accordance with global industry standards. It also includes **the CCF Certification with CTIA Certification Market Endorsement** that verifies that CDMA wireless devices sold into North America conform to the industry standards.

“Shortening certification time is critical for operators and OEMs worldwide to deliver customers high-quality handsets faster,” says Bruce Jolly, General Manager and CFO of the CCF. **“The CCF certification process facilitates the testing of CDMA devices** by providing a single core certification process to all industry players worldwide while being able to adapt to market or operators’ specific requirements with endorsements such as CTIA, Sprint and others. **The Sprint Market Endorsement further demonstrates the value of the CCF certification process** that the wireless industry has worked together to develop”.

Vendors who want to complete Sprint Market Endorsement can go to www.globalccf.org.
